

ED-Only Report

Generated: 2026-03-04 11:23:25

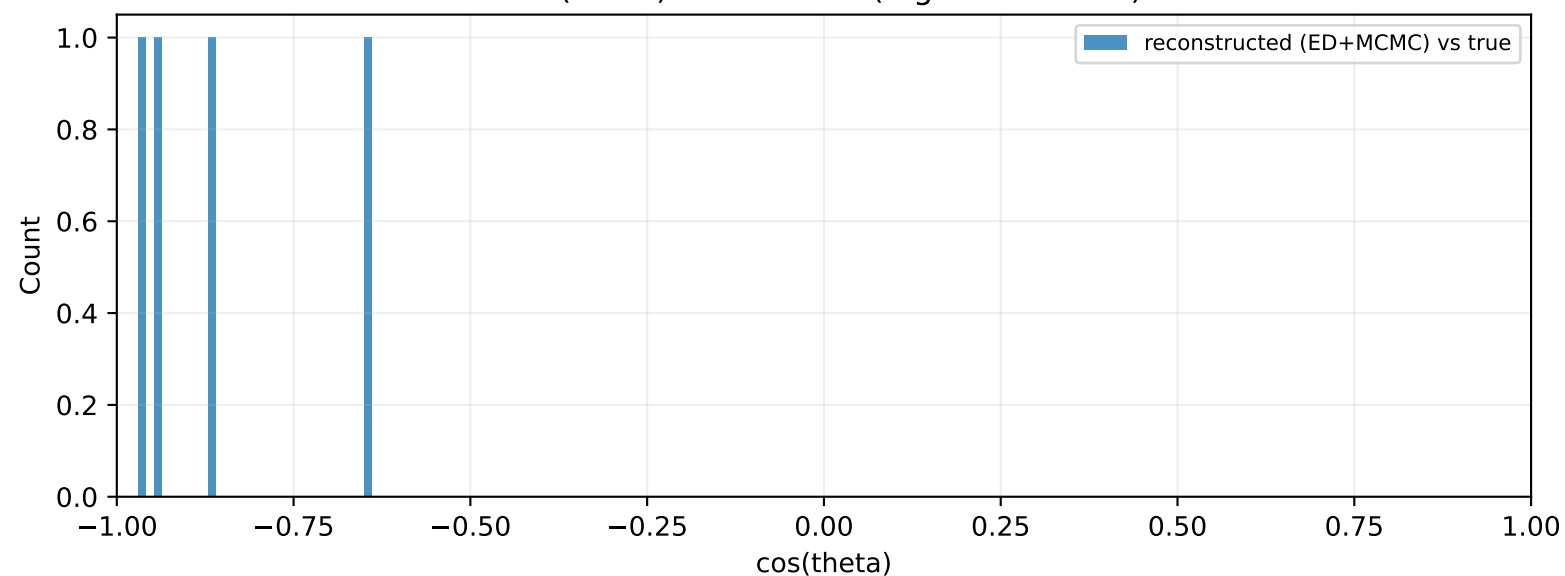

Inference NPZ: /afs/cern.ch/work/e/evilla/private/dune/refactor-snop-pipeline/test/output/ed_only_example/ed_inference.npz
Selected clusters: 4
ed_raw shape: (4, 3)
Has energy: True
Has true dirs: True
Has MCMC mean direction: True

What is plotted in this report:

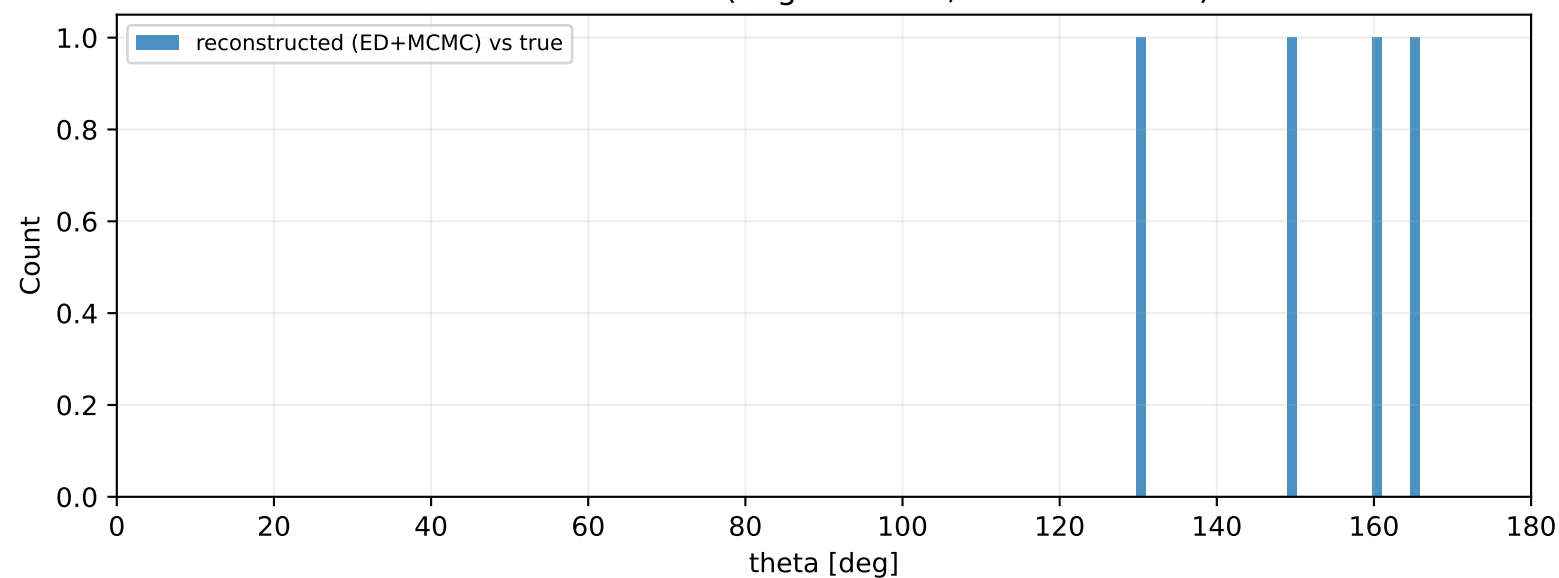

- ED+MCMC mean: refined direction estimated by ED likelihood + MCMC.
- $\cos(\theta)$: alignment with true direction (1 = perfect, -1 = opposite).
- θ [deg]: angular error to truth (0 deg is best).
- CDF: cumulative fraction of clusters with $\theta \leq x$.
- Only truth-vs-reconstructed comparison is shown.

ED-only direction diagnostics

cos(theta) distribution (higher is better)

theta distribution (angular error, lower is better)

theta CDF (fraction of clusters with error $\leq x$)
